Research Summary

A CTP (Composite Transition Piece) battery tray is a component used in the construction of wind turbine towers. It serves as a support structure for housing batteries that are used for various purposes, such as backup power supply, energy storage, or controlling the operation of the turbine. The CTP battery tray is typically made of composite materials, such as fiberglass reinforced plastic (FRP), which offer high strength-to-weight ratio, corrosion resistance, and durability. These trays are designed to securely hold the batteries in place within the tower, protecting them from environmental conditions and vibrations. CTP battery trays are essential components in modern wind turbine towers, contributing to the efficient and reliable operation of the turbines.
