Research Summary

Cu-diamond refers to a composite material that combines copper (Cu) and diamond particles, typically used in applications requiring superior thermal conductivity, electrical conductivity, and mechanical strength. The incorporation of diamond, known for its exceptional thermal properties, enhances the heat dissipation capabilities of copper, making it particularly valuable in high-performance electronic devices, power electronics, and thermal management applications. Cu-diamond composites can be engineered through various methods, including powder metallurgy and sintering techniques, to achieve desired properties and performance characteristics. This innovative material is increasingly used in the semiconductor industry, LED technology, and advanced cooling systems, where efficient heat transfer is critical for maintaining optimal operating conditions and prolonging the lifespan of electronic components.

The major global manufacturers of Cu-Diamond include Sumitomo Electric Industries (ALMT Corp), Changsha Saneway Electronic Materials, Tiger Technologies, Xi'An TRUSUNG Advanced Material, TGS, Haitexinke New Material Technology, etc. The
