Research Summary

A curing agent for epoxy resin is a chemical compound used to initiate and accelerate the curing process of epoxy resins. Epoxy resins are versatile thermosetting polymers that, when combined with a curing agent, undergo a chemical reaction called curing or crosslinking. This reaction creates strong and durable bonds between the epoxy molecules, transforming the liquid resin into a solid and rigid material with excellent mechanical and chemical properties. The choice of curing agent is crucial in determining the final characteristics of the cured epoxy, such as its strength, flexibility, hardness, and temperature resistance. Different types of curing agents, such as amines, anhydrides, and polyamides, are used based on the specific application and desired properties of the cured epoxy. The proper selection and precise mixing of the curing agent with epoxy resin are essential for achieving optimal performance and reliability in various applications, including adhesives, coatings, composites, and industrial manufacturing processes.

The major global manufacturers of Curing Agent for Epoxy Resin include Olin
