Research Summary

A curing agent is a chemical substance used to initiate and accelerate the curing or hardening process of materials, such as adhesives, coatings, resins, and sealants. When added to these materials, the curing agent reacts with the reactive components in the material, such as crosslinkable polymers, to form strong chemical bonds and create a solid and durable product. The curing agent plays a crucial role in determining the final properties of the cured material, such as its strength, flexibility, hardness, and resistance to various environmental factors. Different types of curing agents are used based on the specific application and desired properties of the cured material. For example, in epoxy resins, a curing agent is often used to create strong and durable adhesives, coatings, and composite materials. Curing agents are essential in many industries, including construction, automotive, aerospace, and electronics, where reliable and high-performance materials are required.

The major global manufacturers of Curing Agent include Olin Corporation, Hexion, Huntsman, Kukdo Chemical, Reichhold, Atul, Aditya Birla Group, BASF, Evonik, Cardolite, Gabriel Performance Products, Mitsubishi Chemical, Incorez, Hitachi
