Research Summary

Curved glass is a specialized type of glass that has been shaped to have a smooth and continuous curvature, rather than being flat or straight. It is produced by heating a sheet of glass until it becomes soft and pliable, and then carefully bending it into the desired shape using a mold or other shaping techniques. Once the glass has cooled and solidified, it retains its curved form. Curved glass is used in various architectural and design applications to create visually appealing and unique structures. It is often employed in modern buildings, facades, and interior design elements, such as curved windows, skylights, canopies, and glass staircases. The use of curved glass adds an elegant and futuristic touch to architectural designs, as it allows for innovative and creative building shapes that enhance aesthetics and provide natural light and panoramic views. Additionally, curved glass is known for its strength and durability, making it a reliable choice for various structural and safety requirements in contemporary construction projects.

The major global manufacturers of Curved Glass include AGC, Saint-Gobain, NSG, Guardian, Taiwan Glass, Sisecam, PPG, CRICURSA, Australian Curved Glass, IQ
