Research Summary

Cutting fluids, also known as cutting oils or coolants, are specialized liquids used in machining and metalworking processes to improve cutting performance and extend tool life. These fluids serve multiple purposes, including cooling the cutting tool and workpiece, reducing friction and heat generated during the cutting process, and flushing away metal chips and debris from the cutting zone. Cutting fluids can be applied as flood coolant, which floods the cutting area with a continuous stream of fluid, or as a mist or aerosol to provide targeted cooling and lubrication. They come in various formulations, including water-based, oil-based, and synthetic fluids, each suited for different machining applications and materials. Cutting fluids play a critical role in reducing tool wear, improving surface finish, and enhancing overall machining efficiency, making them essential components in modern metalworking operations. However, proper handling and disposal are necessary to ensure the safety and environmental compliance of these fluids in manufacturing processes.

The major global manufacturers of Cutting Fluids include Houghton (Gulf Oil), BP, Fuchs, Yushiro Chemical, Quaker, Blaser, Idemitsu Kosan, Daido Chemical Industry,
