### Research Summary

Cyazofamid is a fungicide used in agriculture to protect crops from various fungal diseases. It belongs to the class of chemicals known as cyanoimidazole fungicides and is effective against a wide range of plant pathogens. Cyazofamid works by inhibiting the enzyme succinate dehydrogenase in fungal cells, disrupting their energy production and leading to their death. It is commonly used on crops like potatoes, tomatoes, grapes, and lettuce to control diseases such as late blight, downy mildew, and gray mold. Cyazofamid has low toxicity to mammals and is considered safe for use when applied according to label instructions. However, like all pesticides, it should be handled and applied with care to minimize environmental impacts and ensure the safety of farmworkers and consumers. Regulatory agencies in various countries have approved its use in agriculture, subject to specific regulations and maximum residue limits to ensure food safety.
