Research Summary

Cyclopentadiene is a volatile, organic compound with the chemical formula C_5H_6 , characterized by a five-membered ring structure containing alternating single and double bonds between carbon atoms. It is a colorless to pale yellow liquid with a distinctive, somewhat sharp odor, and it is highly reactive due to the nature of its conjugated system. Cyclopentadiene is primarily used as a raw material in the production of a variety of chemicals, including resins, plastics, and as a ligand in organometallic chemistry, particularly in the synthesis of metal complexes like ferrocene. It is also a key precursor in the production of synthetic rubber and other polymer materials. Cyclopentadiene is commonly obtained through the cracking of petroleum and is often stabilized by dimerization to form dicyclopentadiene, which can be used in further chemical processes. Its reactive nature makes it an important compound in both industrial and chemical research applications.

The major global manufacturers of Cyclopentadiene include LyondellBasell Industries, Cymetech, Sinopec Group, Texmark Chemicals, Shell, ORLEN Unipetrol, Dow,

Braskem, Maruzen Petrochemical, MESNAC, Zibo Luhua Hongjin New Material, NOVA Chemicals, etc. The global players competition landscape in this report is divided into three tiers.
