### Research Summary

Cyclopentene is a cyclic hydrocarbon with the chemical formula  $C_5H_8$ . It is a colorless liquid with a distinctive sweet, gasoline-like odor. Cyclopentene is a simple and reactive olefin, containing a carbon-carbon double bond in its ring structure. It is used as a monomer in the synthesis of various polymers, such as polyethylene and polypropylene, and serves as a building block for the production of other chemical compounds. Cyclopentene finds applications in organic synthesis, where its double bond enables it to participate in addition reactions, ring-opening reactions, and polymerizations. Moreover, it is utilized in the manufacturing of fragrances, flavors, and other specialty chemicals. As with any flammable and volatile compound, appropriate safety precautions should be taken when handling cyclopentene.

The major global manufacturers of Cyclopentene include Zeon Corporation, Huangshan Basihui Chemical, Shanghai Pearl Chemical, Zhejiang Alpharm Chemical Technology, Shanghai Gonghe Chemical, Huaian Yihong Chemical, Seqens, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant

industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
