Research Summary

Cylinder sleeves, also known as cylinder liners or engine sleeves, are cylindrical metal liners inserted into the engine block's cylinder bores. They serve as a replacement or reinforcement for the original cylinder walls when they become worn, damaged, or need to accommodate an oversized piston. Cylinder sleeves provide a smooth and durable inner surface for the piston to move up and down while creating a tight seal to prevent gas leakage and maintain compression in the combustion chamber. They also dissipate heat effectively, improving engine performance and longevity. Cylinder sleeves are commonly used in engine rebuilding and performance applications, where they allow for increased bore size and help extend the life of the engine, especially in heavy-duty and high-performance engines. They come in various materials and designs, including cast iron, steel, or aluminum, depending on the specific engine requirements and intended use.

The major global manufacturers of Cylinder Sleeves include TPR Group, ZYNP Corporation, ATGL, MAHLE Group, Tenneco, Yoo Sung Enterprise, NPR, Bergmann
