Research Summary

A cystoscope is a medical instrument used for diagnostic and therapeutic procedures in urology. It is a thin, flexible or rigid tube with a light source and a camera at the tip, which allows visualization of the urinary tract, including the bladder, urethra, and sometimes the ureters. The cystoscope is inserted into the urinary opening (urethra) and advanced through the urethra into the bladder, providing real-time images of the internal structures on a monitor. This procedure, called cystoscopy, helps urologists diagnose and treat various urinary tract conditions, such as bladder tumors, kidney stones, urinary tract infections, and urinary incontinence. During cystoscopy, the urologist may also perform interventions like removing bladder stones, taking biopsies, or performing small surgical procedures. The flexibility and versatility of the cystoscope make it an indispensable tool in modern urological practice, offering a minimally invasive means of evaluating and managing urinary tract issues.

The major global manufacturers of Cystoscope include Karl Storz, Olympus, Stryker, Richard Wolf, HOYA, Schoelly, Ackermann, Shenda Endoscope, Tiansong Medical
