Research Summary

A CZT (Cadmium Zinc Telluride) radiation detector is a type of semiconductor detector used to measure and detect ionizing radiation. CZT is a compound semiconductor material with a high atomic number and wide bandgap, making it well-suited for detecting gamma rays and X-rays. The CZT detector operates by creating electron-hole pairs when ionizing radiation interacts with the semiconductor material. These electron-hole pairs are collected and produce an electrical signal proportional to the energy of the incident radiation, allowing for precise spectroscopic measurements. CZT radiation detectors are used in various applications, including medical imaging, nuclear medicine, security screening, and non-destructive testing, where accurate and sensitive detection of ionizing radiation is essential. They offer advantages over traditional scintillation detectors, such as higher resolution, improved energy response, and compact size, making them valuable tools in radiation detection and measurement.

The major global manufacturers of CZT Radiation Detector include Redlen Technologies, Mirion Technologies, Kromek, Imdetek, XZ LAB, ZRF Ritec SIA, Baltic

Scientific Instruments (BSI), Eurorad, etc. The global players competition landscape in this report is divided into three tiers.
