Research Summary

Daidzein is a natural plant-based compound classified as an isoflavone and a phytoestrogen. It is found primarily in soybeans and other legumes. Daidzein has gained attention for its potential health benefits and estrogen-like effects, although its activity as a phytoestrogen is weaker than that of human estrogen. As a result, it may have implications in managing hormonal imbalances and symptoms related to menopause. Additionally, daidzein is being studied for its potential role in reducing the risk of certain cancers, such as breast and prostate cancer, due to its antioxidant and anti-inflammatory properties. It is commonly consumed as part of soy-based foods and dietary supplements, and ongoing research continues to explore its various health effects and potential therapeutic applications. However, as with any bioactive compound, caution should be exercised, and medical advice sought before using daidzein supplements, especially for individuals with hormone-related health conditions or who are taking certain medications.

The major global manufacturers of Daidzein include ADM, Frutarom Health, Shaanxi Huike, Xi'an Desheng yuan, Jiangxi Shun Tiancheng, Changzhou Longterm, Shaanxi
