Research Summary

Damper actuators are devices used to control and adjust the position of dampers in HVAC (Heating, Ventilation, and Air Conditioning) systems. Dampers are movable plates or blades installed in air ducts or ventilation openings to regulate the flow of air and control temperature, humidity, and air distribution within a building or system. Damper actuators are typically motorized devices that attach to the dampers and enable automatic or remote control of their position. They can open or close the dampers partially or fully based on the signals received from thermostats, building automation systems, or other control devices. By adjusting the position of the dampers, damper actuators help maintain the desired indoor climate, improve energy efficiency, and ensure proper ventilation and air distribution throughout the building, contributing to occupant comfort and building performance.

The major global manufacturers of Damper Actuators include Belimo, Johnson Controls, Siemens, Honeywell, Rotork, Schneider, Azbil Corporation, Neptronic, KMC Controls, Dura Control, Dwyer Instruments, Hansen Corporation, Kinetrol, etc. The global players
