### Research Summary

A data center busway, also known as a power busway or bus duct, is an electrical distribution system used to deliver power to IT equipment and other electrical loads within a data center. It consists of a series of conductive metal bars or conductors housed in a protective enclosure, such as a metal or non-metallic housing. The busway is installed overhead or along the perimeter of the data center, providing a flexible and efficient method of distributing electrical power to server racks, switches, storage systems, and other equipment. Data center busways offer advantages like reduced installation time, simplified cable management, and the ability to easily add or remove power taps as needed. They are designed to handle high power loads and provide a reliable and scalable power distribution solution for modern data centers, contributing to increased energy efficiency and overall data center performance.

The major global manufacturers of Data Center Busway include UEC, Schneider Electric, ABB, Siemens, Honeywell, Vertiv, Eaton, PDI, E + I Engineering, EAE, Natus, Vass Electrical Industries, DBTS Industries Sdn Bhd, WETOWN Electric, Delta Group,
