### Research Summary

Data Center Interconnect (DCI) technology refers to the set of solutions and technologies used to connect and link multiple data centers together over a wide area network (WAN). DCI enables seamless communication, data replication, and workload distribution between geographically dispersed data centers, facilitating efficient data sharing and resource utilization across the network. This technology is essential for organizations and enterprises that have multiple data centers located in different regions or cities and need to create a unified and interconnected infrastructure to support their IT and business operations. DCI solutions may include dedicated dark fiber or leased lines, optical networking technologies like Dense Wavelength Division Multiplexing (DWDM), and software-defined networking (SDN) approaches for dynamic and flexible management of data flows. DCI technology ensures high-speed and low-latency connectivity between data centers, enhancing data redundancy, disaster recovery capabilities, and overall performance while enabling the seamless delivery of services to end-users across the network.

The major global suppliers of Data Center Interconnect (DCI) Technology include Ciena Corporation, NOKIA Corporation, Huawei Technologies, Juniper Network, Infinera Corporation, CISCO Systems, ADAVA Optical Networking, Extreme Network, Fujitsu, etc. The global players competition landscape in this report is divided into three tiers.
