### Research Summary

A data lake system is a centralized storage repository that allows organizations to store vast amounts of structured, semi-structured, and unstructured data in its native format at a relatively low cost. Unlike traditional data warehousing systems that require data to be processed and structured before storage, data lakes are designed to ingest data from various sources without the need for extensive preprocessing. This raw data can include anything from log files, sensor data, social media feeds, to documents, images, and videos. Data lakes leverage scalable and distributed storage technologies, such as Hadoop Distributed File System (HDFS) or cloud-based storage solutions like Amazon S3 or Azure Data Lake Storage, to accommodate the growing volume, velocity, and variety of data generated by modern businesses. Additionally, data lakes often integrate with data processing and analytics tools, such as Apache Spark or Apache Flink, to perform data transformations, analysis, and machine learning tasks directly on the raw data stored within the lake. This flexibility and scalability make data lakes a valuable asset for organizations looking to derive insights, make data-driven decisions, and support advanced analytics initiatives. However, managing data quality, governance,

and security within a data lake environment remains a challenge that organizations must address to ensure the reliability and integrity of the data stored within the system.

The major global suppliers of Data Lake System include AWS, Microsoft, Alibaba Cloud, Google, Huawei Cloud, IBM, Tencent Cloud, SAP SE, Oracle, Hewlett Packard Enterprise, Hitachi Vantara, Informatica, Teradata Corporation, etc. The global players competition landscape in this report is divided into three tiers. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
