### Research Summary

Data loggers are electronic devices used to automatically record and collect data from various sensors and instruments over a period of time. They are compact, self-contained units that can be placed in different environments or attached directly to the equipment being monitored. Data loggers are equipped with internal memory to store the collected data, and they can be programmed to record data at specific intervals or in response to certain events. Common types of data loggers include temperature loggers, humidity loggers, pressure loggers, voltage loggers, and more. Once the data collection is complete, the information can be retrieved from the data logger and transferred to a computer for further analysis and reporting. Data loggers are widely used in industries such as environmental monitoring, transportation, manufacturing, and research, providing valuable insights into processes, conditions, and trends over time.

The major global manufacturers of Data Loggers include Onset HOBO, Testo, National Instruments Corporation, Omega Engineering, Rotronic, Ammonit Measurement, ELPRO-BUCHS, Omron, Vaisala, Sensitech, Fluke, Dickson, HIOKI, Delta-T Devices,
