Research Summary

Decaborane, with the chemical formula $B_{10}H_{14}$, is a colorless, volatile, and highly reactive boron hydride compound composed of ten boron atoms and fourteen hydrogen atoms. It appears as a crystalline solid with a sweet, gasoline-like odor and is notable for its cage-like molecular structure, which makes it a key compound in the study of boron chemistry. Primarily used in chemical vapor deposition and as a precursor for boron-containing materials, decaborane also serves as a high-energy fuel additive and a reagent in organic synthesis. Due to its toxicity and flammability, it requires careful handling and storage under controlled conditions.

The major global manufacturers of Decaborane include American Elements, ABCR, Ascensus Specialties, Santa Cruz Biotechnology, Thermo Fisher Scientific, Merck, FUJIFILM Wako Pure Chemical, Katchem, LGC, Boron Specialties, Biosynth, etc. The global players competition landscape in this report is divided into three tiers.
