### Research Summary

Decabromodiphenyl ethane (DBDPE) is a flame retardant chemical used to reduce the flammability of various materials, such as plastics, textiles, and electronics. It is a replacement for the widely used decabromodiphenyl ether (decaBDE), which has been phased out or restricted due to environmental and health concerns. DBDPE is composed of ten bromine atoms attached to a diphenyl ethane backbone. It is effective in preventing the ignition and spread of fires by releasing bromine radicals that interfere with the combustion process. DBDPE is commonly used in products like electrical appliances, construction materials, and transportation equipment to meet fire safety regulations and standards. However, like many brominated flame retardants, DBDPE has raised concerns about potential environmental persistence and bioaccumulation, prompting efforts to find more sustainable and less hazardous alternatives.

The major global manufacturers of Decabromodiphenyl Ethane include Albemarle, ICL Industrial Products, Chemtura, Weidong Chemical, Suli Chemical, Haiwang Chem, Tianyi Chem, Runke, Unibrom Corp, Oceanchem Group, Luyuan Salt Chemical,
