### Research Summary

Decalin, also known as decahydronaphthalene or bicyclo[4.4.0]decane, is a saturated bicyclic hydrocarbon compound composed of two fused cyclohexane rings. It is a colorless, oily liquid with a mild odor and is insoluble in water but soluble in organic solvents like ether and alcohol. Decalin is commonly used as a solvent in various industrial applications, including inks, paints, adhesives, and chemical synthesis. It is valued for its ability to dissolve a wide range of substances and its low volatility, which makes it suitable for use in formulations where slow evaporation rates are desired. Decalin is also used as a reference standard in chromatography and spectroscopy techniques for analyzing hydrocarbon mixtures. Additionally, it serves as a precursor in the synthesis of other chemical compounds, including pharmaceuticals and fragrances. However, it is important to handle decalin with caution as it is flammable and may cause skin and eye irritation upon contact.

The major global manufacturers of Decalin include Evonik Industries AG, BASF SE, Monument Chemicals, Inc., Jiangsu Zhongneng Chemical Technology Co., Ltd., Jiangyin Dading Chemical Co., Ltd., etc. The global players competition landscape in
