Research Summary

Degradable recycled products refer to items that are both recyclable and designed to break down naturally over time, eventually returning to the environment as harmless substances. These products are made from materials that can undergo biodegradation, a process in which microorganisms break down the product into simpler compounds, such as water, carbon dioxide, and organic matter. Unlike traditional plastics and non-degradable materials that can persist in the environment for hundreds of years, degradable recycled products aim to reduce the ecological impact of waste and promote a more sustainable circular economy. Examples of such products include biodegradable plastics, compostable packaging, and eco-friendly paper products. By using degradable recycled products, consumers and businesses contribute to minimizing waste, conserving resources, and mitigating the harmful effects of pollution on the planet.

The major global manufacturers of Degradable Recycled Products include Ningbo Homelink Eco-itech, Dongguan Sichun Plastic Products, Hengxin Life Science and Technology, Ecoplast Technologies, Suzhou Hanfeng New Material, Torise
