Research Summary

Dental amalgam is a dental filling material that has been used for over a century to restore decayed or damaged teeth. It is a mixture of metals, primarily consisting of silver, tin, copper, and mercury. The liquid mercury acts as a binding agent, combining with the powdered metal alloy to form a malleable, putty-like material that can be easily placed into cavities. Once placed in the tooth, the amalgam hardens and becomes a durable, long-lasting filling that can withstand the forces of chewing. Dental amalgam has been valued for its strength, affordability, and ease of use, making it a common choice for restoring teeth, especially in areas of the mouth subjected to heavy chewing loads. However, due to concerns about the potential release of mercury vapor, some dental professionals and patients have shifted towards alternative dental materials, such as tooth-colored composite resins.

The major global manufacturers of Dental Amalgam include Dentsply Sirona, Envista Holdings, SDI Limited, Ivoclar Vivadent, AB Ardent, Inci Dental, DMG, DMP, Silmet, etc. The global players competition landscape in this report is divided into three tiers.
