### Research Summary

Dental amalgam separators are specialized devices used in dental offices to capture and separate amalgam particles from wastewater generated during dental procedures involving dental amalgam restorations. Dental amalgam is a mixture of metals that can contain small amounts of mercury, and when removed or drilled out of patients' teeth, these particles can find their way into the dental office's wastewater. Amalgam separators are designed to prevent the release of these particles into the environment, ensuring compliance with environmental regulations and best practices for mercury waste management. The separators work by using various methods, such as sedimentation, filtration, and centrifugation, to trap and isolate the amalgam particles, allowing for safe disposal and recycling. By using dental amalgam separators, dental offices can contribute to reducing the environmental impact of dental amalgam waste and protect water sources from potential mercury contamination.

The major global manufacturers of Dental Amalgam Separators include Solmetex, MedenteX, METASYS, D?rr Dental, Rebec Environmental, Dental Recycling North
