Dental anesthesia, also known as dental local anesthesia or dental numbing, refers to the administration of medications to block pain and sensation in a specific area of the mouth during dental procedures. The goal of dental anesthesia is to create a painless and comfortable experience for the patient while allowing the dentist to perform necessary treatments without causing discomfort. Dental anesthesia is commonly achieved through the use of local anesthetics, which are drugs that temporarily block nerve impulses in the targeted area. The anesthetic is typically injected into the gums or surrounding tissues near the tooth to be treated.
