### Research Summary

Dental CAM (Computer-Aided Manufacturing) milling machines are advanced devices used in modern dentistry to create precise dental restorations, such as crowns, bridges, inlays, and dentures, directly from digital designs. These machines operate by using computer-controlled tools to mill or carve dental materials—such as ceramic, zirconia, or composite resins—into the desired shape with high accuracy and speed. The process begins with a 3D scan of the patient's oral structure, followed by the creation of a digital model, which is then fed into the CAM system. Dental CAM milling machines are widely used in dental labs and clinics for producing custom restorations with enhanced fit, function, and aesthetics, often in a single visit, reducing the need for multiple appointments and improving overall treatment efficiency.

The major global manufacturers of Dental CAM Milling Machines include Dentsply Sirona, Ivoclar Vivadent, Roland, Straumann, Zimmer, Zirkozahn, Willemin-Macodel, Dentium, Amann Girrbach, imes-icore, DATRON, Schutz Dental, vhf camfacture, Yenadent, B&D Dental, INTERDENT d.o.o., etc. The global players competition
