Research Summary

Dental fiberglass posts are thin, flexible, and biocompatible rods made from composite materials containing fiberglass or similar fibers, commonly used in restorative dentistry. These posts are employed to provide structural support and stability within a tooth that has undergone root canal treatment or has lost a significant portion of its natural structure. After the removal of damaged or infected material, a dental fiberglass post is placed into the root canal space and bonded with a resin material. This creates a secure foundation for subsequent placement of a dental crown, reinforcing the tooth's strength and ensuring its functional longevity. Dental fiberglass posts offer the advantage of being less rigid than traditional metal posts, which can help to distribute stresses more evenly and reduce the risk of tooth fractures.

The major global manufacturers of Dental Fiberglass Posts include 3M ESPE, Ivoclar Vivadent, Danaher, VOCO GmbH, Anthogyr (Straumann), Ultradent Products, COLTENE Group, FGM, Dentatus, DMG America, Harald Nordin, Oyaricom, Angelus, etc. The global players competition landscape in this report is divided into three tiers.
