Research Summary

Dental glue, also known as dental adhesive or bonding agent, is a specialized material used in dentistry to bond restorations, such as crowns, bridges, veneers, and fillings, to natural tooth structures. It is typically composed of resins, polymers, and chemical compounds that create a strong bond between dental materials and the tooth's enamel or dentin. Dental glue is essential in procedures like cavity fillings, orthodontic bracket placement, and the installation of dental prosthetics, as it enhances the retention and longevity of the restoration. It is formulated to offer high strength, minimal sensitivity, and good resistance to moisture and temperature fluctuations. Additionally, dental adhesives come in different types, such as etch-and-rinse, self-etch, or dual-cure, depending on the specific dental procedure and the materials being used.
