### Research Summary

Dental implants and prostheses constitute a comprehensive solution in restorative dentistry for individuals with missing teeth. Dental implants are titanium posts surgically placed into the jawbone, serving as anchors for prosthetic replacements. The prostheses, which can be crowns, bridges, or dentures, are then securely attached to the implants, restoring both the aesthetic appearance and functional capabilities of natural teeth. This approach provides stability, durability, and improved biting and chewing capabilities, while also preventing bone loss in the jaw. Dental implants and prostheses offer patients a transformative solution to regain a natural-looking smile and regain confidence in their oral health.
