### Research Summary

Dental laser products are advanced medical devices used in dentistry to perform a variety of procedures with increased precision, reduced pain, and faster healing times compared to traditional methods. These lasers use concentrated light energy to target and treat both hard and soft tissues in the mouth. In hard tissue procedures, such as cavity preparation or tooth reshaping, lasers can precisely remove decayed material without the need for drills. For soft tissue applications, including gum reshaping, frenectomies, and periodontal treatment, lasers provide clean cuts with minimal bleeding and promote quicker recovery. Dental lasers are also employed in teeth whitening, lesion removal, and the treatment of cold sores and other oral lesions. The use of dental lasers enhances patient comfort, reduces the risk of infection, and often eliminates the need for anesthesia, making them a valuable tool in modern dental practice.

The major global manufacturers of Dental Laser Products include Biolase, Convergent Dental, Yoshida Dental, Fotona, CAO Group, Dentsply Sirona, Light Instruments,
