Research Summary

A dental ultrasonic scaler is a handheld instrument used by dental professionals to remove plaque, tartar, and stains from teeth through the use of ultrasonic vibrations. It consists of a handpiece that holds a vibrating metal tip or insert. When activated, the tip generates high-frequency sound waves that create mechanical vibrations. These vibrations disrupt the bonds between deposits and teeth, effectively breaking down and dislodging the buildup. Dental ultrasonic scalers are commonly used during professional dental cleanings and periodontal treatments to improve oral hygiene and prevent gum disease, offering an efficient and comfortable alternative to manual scaling techniques.
