Research Summary

Dephenolized cottonseed protein is a type of plant-based protein derived from cottonseeds after the phenolic compounds have been removed. Cottonseeds naturally contain a variety of bioactive compounds, including gossypol, which can be toxic and affect the nutritional quality of the protein. The dephenolization process involves treating the cottonseed meal to remove these harmful phenolic compounds, making the protein safe for consumption and enhancing its digestibility. Dephenolized cottonseed protein is a valuable source of protein for both human and animal nutrition due to its high protein content, amino acid profile, and lower levels of anti-nutritional factors. It is commonly used in the food industry as a protein supplement, in plant-based food products, or as a functional ingredient in animal feed, providing an alternative to more traditional protein sources like soy or whey. Additionally, it has potential applications in the pharmaceutical and cosmetic industries due to its bioactive properties.

The major global manufacturers of Dephenolized Cottonseed Protein include Chenguang Biotech, Xinjiang Jinlan, Xinjiang Tycoon, Xinsai Group, Tiakang Biotech,
