### Research Summary

A desiccant dehumidifier is a device used to remove excess moisture from the air in indoor spaces. Unlike refrigerant-based dehumidifiers that condense moisture onto a cold surface, desiccant dehumidifiers utilize a desiccant material, often silica gel or zeolite, to absorb moisture directly from the air. The process involves drawing humid air through the desiccant, which adsorbs the moisture, and then releasing the drier air back into the environment. Desiccant dehumidifiers are particularly effective in low-temperature environments and can operate at temperatures as low as freezing point. They find applications in areas with high humidity levels, such as basements, industrial processes, museums, and storage facilities, helping to prevent mold growth, corrosion, and other issues associated with excess moisture.

The major global manufacturers of Desiccant Dehumidifier include Munters, Park, Ingersoll Rand, Atlascopco, Stulz, Kaeser, Trotec, Quincy, Seibu Giken DST, SPX (Hankison), Condair, Rotorcomp, Star Compare, Zeks, Sullair, Risheng, Fisen, Desiccant Technologies Group, etc. The global players competition landscape in this
