Research Summary

Desulfurization and denitrification are processes used in environmental and industrial contexts to remove sulfur and nitrogen compounds respectively from gases or liquids. Desulfurization involves the reduction of sulfur dioxide (SO₂) emissions, commonly found in fossil fuel combustion exhaust, by employing methods like scrubbers or catalytic converters to convert sulfur compounds into less harmful forms. Denitrification, on the other hand, targets nitrogen oxides (NO_x) present in emissions, often from combustion engines or industrial processes, using techniques such as selective catalytic reduction (SCR) to convert nitrogen compounds into nitrogen and water. Both processes play a crucial role in reducing air and water pollution, mitigating the negative environmental and health impacts associated with these pollutants.

The major global manufacturers of Desulfurization and Denitrification include Longking, SPC, Jiulong, Feida, KaiDi, United, Longyuan, Sanrong, BOQI, Combustion Control Technology, YONKER, etc. The global players competition landscape in this report is divided into three tiers.
