Research Summary

Deuterated chloroform, often abbreviated as CDCl_3 , is a stable isotopologue of chloroform (CHCl_3) in which the hydrogen atoms are replaced by deuterium atoms. Deuterated chloroform is commonly used as a solvent in nuclear magnetic resonance (NMR) spectroscopy. Because deuterium has a different nuclear magnetic moment than hydrogen, deuterated chloroform produces significantly narrower NMR peaks compared to regular chloroform, which can improve spectral resolution and facilitate more accurate analysis of chemical structures and molecular interactions. Deuterated chloroform is also less susceptible to chemical degradation and contamination, making it a preferred solvent for high-resolution NMR experiments. Additionally, deuterated chloroform is less toxic and less volatile than regular chloroform, making it safer to handle and dispose of in laboratory settings.

The major global manufacturers of Deuterated Chloroform include Spectrum Chemical, Avantor Sciences, Wako Chemicals, Aladdin Biochemical, Titan Scientific, Nanjing Chemical Reagent, CIL Group, UIV Chem, SYNMR Chemical, etc. The global players

competition landscape in this report is divided into three tiers.
