Research Summary

A deuterated solvent is a type of solvent used in nuclear magnetic resonance (NMR) spectroscopy for analyzing the molecular structure and properties of compounds. Deuterated solvents contain deuterium, a stable isotope of hydrogen, in place of regular hydrogen atoms. Deuterium possesses a different nuclear magnetic resonance frequency, allowing it to serve as a "lock" signal in NMR experiments, which enhances the accuracy and quality of the NMR spectra obtained. Deuterated solvents are used as a background medium in NMR experiments, providing a stable reference point for the sample being analyzed. Common deuterated solvents include deuterated chloroform (CDCl₃), deuterated dimethyl sulfoxide (DMSO-d₆), and deuterated methanol (CD₃OD).

The major global manufacturers of Deuterated Solvent include Cambridge Isotope Laboratories, Merck Group, SustGreen Tech, Cuiying Chemical, Thermo Fisher, TCI Chemicals, The 718th research institute of CSSC (PERIC), Shaoxing Shunbang Pharmaceutical Technology, Shandong Hanfeng New Material Technology, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold

a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
