### Research Summary

Deuterium is a stable isotope of hydrogen with an atomic mass of approximately 2, containing one proton, one neutron, and one electron in its nucleus. Due to its additional neutron, deuterium is slightly heavier than regular hydrogen and is often represented as  $^2\text{D}$  or  $^2\text{H}$ . Deuterium is commonly used in scientific research, particularly in nuclear magnetic resonance (NMR) spectroscopy, as it provides distinct properties compared to hydrogen and allows for precise analysis of molecular structures and interactions. It is also utilized in various fields, such as isotope labeling in chemistry and biochemistry, as well as in nuclear fusion research.

The major global manufacturers of Deuterium include Linde Gas, Matheson Tri-Gas, Cambridge Isotope Laboratories, Sigma-Aldrich, Center of Molecular Research, CSIC, Sumitomo Seika Chemical, Heavy Water Board (HWB), Isowater Corporation, Shenzhen Kylin Technology, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong

competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.

This report studies the market size, price trends and future development prospects of Deuterium. Focus on analysing the market share, product portfolio, prices, sales, revenue and gross profit margin of global major manufacturers, as well as the market status and trends of different product types and applications in the global Deuterium market.
