Research Summary

Dual-energy X-ray absorptiometry (DEXA) bone densitometers are medical imaging devices used to measure bone density and assess bone health. DEXA scans involve using two X-ray beams of different energy levels to determine the amount of mineral content, primarily calcium, in bones. This information helps in diagnosing conditions such as osteoporosis, which weakens bones and increases the risk of fractures. DEXA bone densitometers provide valuable information about bone strength, helping healthcare professionals assess fracture risk and make informed decisions regarding treatment and preventive measures. These machines are commonly used in clinics, hospitals, and research centers, contributing to early detection and management of bone-related disorders.

The major global manufacturers of DEXA Bone Densitometers include GE Healthcare, Hologic, OSTEOSYS, DMS, Medilink, Swissray (Norland), Xingaoqi, Osteometer, Lone Oak Medical, etc. The global players competition landscape in this report is divided into three tiers.
