Research Summary

Di-Isononyl Phthalate (DINP) is a type of phthalate plasticizer used in the production of various flexible polyvinyl chloride (PVC) products. It is known for its ability to impart flexibility, durability, and softness to PVC materials, making them suitable for applications such as vinyl flooring, coated fabrics, cables, toys, and automotive parts. DINP is chosen as a plasticizer due to its relatively low volatility and good compatibility with PVC, which helps maintain the desired physical properties over time. However, concerns about potential health and environmental effects have prompted regulatory evaluations and restrictions in some regions, leading to increased scrutiny and the development of alternative plasticizers with potentially lower associated risks.

The major global manufacturers of Di-Isononyl Phthalate (DINP) include BASF, Evonik, ExxonMobil, Mitsubishi Chemical, Polynt, UPC Group, Aekyung Petrochemical, Sari Daya Plasindo (SDP), Xiongye Chem, Kunshan Hefeng, PNK, AO Chemicals Company, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market

share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
