### Research Summary

Diamond saw blades are cutting tools equipped with diamond particles embedded in the blade's edge or rim, used for cutting hard and abrasive materials such as stone, concrete, ceramics, and glass. The diamonds on the blade's surface provide hardness and abrasion resistance, allowing the blade to efficiently cut through these tough materials. Diamond saw blades come in various sizes and configurations, including segmented, continuous rim, and turbo designs, each optimized for specific applications. They are widely used in construction, masonry, and manufacturing industries for tasks like cutting tiles, granite countertops, concrete slabs, and more. The use of diamond particles enhances the blade's durability and cutting speed, making it a crucial tool for precision cutting in challenging materials.
