Research Summary

Dicaprylyl carbonate is an ester compound derived from caprylic acid, a medium-chain fatty acid, and carbonic acid. It is a versatile ingredient used in cosmetics, skincare, and personal care products as an emollient, solvent, and texture enhancer. Dicaprylyl carbonate's lightweight and non-greasy texture make it a popular choice for lotions, creams, sunscreens, and other formulations, as it helps improve the spreadability and absorption of products while providing a silky, smooth feel to the skin. Its ability to create a protective barrier on the skin's surface and its compatibility with various other ingredients contribute to its wide range of applications in the cosmetic industry.

The major global manufacturers of Dicaprylyl Carbonate include BASF, Taiwan NJC Corporation, Solvay, etc. The global players competition landscape in this report is divided into three tiers.
