Research Summary

Dicing Die Attach Film (DDAF) is a specialized adhesive film used in semiconductor manufacturing processes to temporarily bond semiconductor wafers to a support carrier during the dicing or sawing process. It is designed to hold the individual semiconductor chips in place while they are being cut from the wafer, ensuring precise and accurate separation. Dicing Die Attach Film also provides protection to the sensitive circuitry during the dicing process. After dicing, the individual chips can be easily removed from the film for further processing. DDAF contributes to the efficiency and precision of wafer dicing processes in semiconductor fabrication, enabling the creation of smaller and more intricate electronic components.
