Research Summary

Dielectric powders are finely ground materials with insulating properties that are used to enhance the electrical properties of various systems. These powders are often added to materials like plastics, polymers, or coatings to improve their dielectric strength, electrical insulation, and thermal conductivity. Dielectric powders can also be used in manufacturing capacitors, insulating materials, and electronic components to prevent electrical leakage and optimize performance. These powders are engineered to have high breakdown voltage and low conductivity, ensuring effective electrical isolation in applications where maintaining insulation and preventing electrical interference are essential.
