Research Summary

Diesel refers to a type of liquid fuel used primarily in internal combustion engines, particularly in diesel engines, which are commonly found in vehicles like trucks, buses, and some cars. Diesel fuel is produced from crude oil through a refining process that involves distillation and refining of heavier hydrocarbon fractions. It has a higher energy density than gasoline, which contributes to its fuel efficiency and ability to generate greater torque, making it suitable for applications requiring substantial power output. Diesel engines operate by compressing air within the cylinder to a high temperature, at which point fuel is injected, igniting due to the heat generated by compression. Diesel fuel is known for its durability, fuel efficiency, and longevity, but it also produces higher levels of nitrogen oxides and particulate matter compared to gasoline engines, which has led to ongoing discussions regarding its environmental impact.

The major global manufacturers of Diesel include BP, Shell, CNPC, EXXON MOBIL, Sinopec, Indian Oil, TOTAL, Chevron, Pertamina, Petronas, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant

industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
