### Research Summary

Diethanol isopropanolamine (DEIPA) is a chemical compound used as a cement grinding aid in the construction industry, particularly in the production of cement. It functions as a dispersing agent and helps improve the efficiency of the grinding process by reducing the agglomeration of particles and enhancing the flow properties of cement. DEIPA can also assist in achieving higher fineness and improved cement quality while reducing energy consumption during grinding. Additionally, DEIPA can act as a strength enhancer for cement, contributing to enhanced early and ultimate strength properties. Its effectiveness in improving cement processing and performance has led to its application in cement production to enhance grinding efficiency and overall product quality.
