Research Summary

Digital dentures, also known as computer-aided design and computer-aided manufacturing (CAD/CAM) dentures, are a modern approach to creating removable dental prosthetics. Utilizing advanced digital technologies, these dentures are designed using digital impressions of a patient's oral structures, which are captured through intraoral scanners. The digital data is then used to create a precise 3D model of the denture, allowing for customization of fit, appearance, and occlusion. CAD/CAM technology facilitates the fabrication of dentures through computer-guided milling or 3D printing, resulting in accurate and comfortable prosthetics that can be efficiently produced. Digital dentures offer benefits such as improved aesthetics, reduced chair time, and enhanced patient satisfaction by tailoring the dentures to the individual's unique oral anatomy and preferences.
