Research Summary

Digital fabrication inkjet inks are specialized formulations used in inkjet printing technologies to precisely deposit liquid materials onto various surfaces to create three-dimensional objects or intricate patterns. These inks are designed for use in additive manufacturing processes such as 3D printing, where they are deposited layer by layer to build up objects. They can also be used for printing onto textiles, ceramics, glass, and other substrates. Digital fabrication inkjet inks are developed to have specific properties such as viscosity, adhesion, and curing characteristics that enable accurate and controlled deposition, ensuring the creation of high-quality, complex structures or designs. These inks play a crucial role in modern fabrication techniques, enabling rapid prototyping, customization, and the creation of intricate objects with precision.
