Research Summary

Digital impression standalone scanners are advanced dental devices used to create precise digital impressions of a patient's teeth and oral structures for various dental procedures. These scanners utilize cutting-edge optical and laser technology to capture detailed 3D images of the patient's dentition, eliminating the need for traditional messy and uncomfortable physical impressions. The digital impressions are then used in computer-aided design and manufacturing (CAD/CAM) processes for creating dental restorations, orthodontic appliances, and prosthetics. Standalone scanners offer convenience, accuracy, and efficiency in dental practices by improving patient comfort, reducing chair time, and ensuring better-fitting and more personalized dental treatments.
