Research Summary

A digital metal detector is an electronic device used to detect the presence of metallic objects buried underground or hidden in various materials. It utilizes electromagnetic technology to generate and transmit signals into the ground or through materials, and then analyzes the signals that are reflected back. By evaluating changes in the electromagnetic field caused by the presence of metal objects, the detector provides audio and visual cues to the operator, indicating the location and potential type of metal detected. Digital metal detectors are commonly used in applications like treasure hunting, archaeology, security screening, and construction to locate valuable items, artifacts, or potentially hazardous metallic objects.

The major global manufacturers of Digital Metal Detector include Minelab (Codan), Garrett, Fisher Research Labs, White's Electronics, Bounty Hunter, Nokta Makro, Teknetics, Tesoro Electronics, Junhong Electronic&Technology, OKM, etc. The global players competition landscape in this report is divided into three tiers.
