Research Summary

Digital parcel locker systems are automated, secure, and self-service kiosks designed to facilitate the delivery and pickup of packages. These systems consist of a network of lockers equipped with digital interfaces, allowing users to receive, store, and retrieve parcels without the need for direct interaction with a delivery person. When a package is delivered, the system automatically assigns a specific locker and notifies the recipient with a unique access code or QR code. The recipient can then access the locker at their convenience, typically 24/7. Digital parcel locker systems are commonly used in urban environments, apartment complexes, shopping centers, and workplaces, offering a more efficient and contactless alternative to traditional delivery methods. They help reduce missed deliveries, improve logistics efficiency, and enhance customer convenience, especially in the context of growing e-commerce and the increasing demand for flexible delivery options.
